HARBOR CITY, CA 90710

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

PO BOX 823
SKYFOREST, CA 92385

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

SHIELDS, WILLIAM
P.O BOX 331
CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

EICH, DANIEL AND SHAWNA
PO BOX 1166
CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

EASTMAN FAMILY TRUST
1402 Lansdowne Ln
Santa Ana, CA 92705

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

LEE, MARK
PO BOX 702
CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

PO BOX 2516
BLUE JAY, CA 92317

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

PO BOX 3088
CRESTLINE, CA 92325

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

SPEARS, ALAN E.
PO BOX 1220
CEDAR GLAN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

ESCOBEDO, CARLOS LOPEZ
PO BOX 561
CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

COSTA MESA, CA 92626

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District

ALEY, KEVIN
PO BOX 261
CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. BLACK, KENT ROBERT
PO BOX 187
CEDAR GLEN, CA 92321

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

PHILLIPS, JOHN JR.
PO BOX 3707
LAKE ARROWHEAD, CA 92352

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District

LOS ANGELES, CA 90026

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board. For guidance on reducing lead exposure and understanding its health effects, visit the EPA's website: http://www.epa.gov/lead.

Thank you for your prompt attention to this critical matter.

Sincerely,

Gregory Snyder

SUBJECT: DRINKING WATER SERVICE LINES INVENTORY

Dear Customer:

As part of routine compliance with state and federal regulations, we are conducting an inventory of all water service lines within County Service Area (CSA) 70 Cedar Glen. The Environmental Protection Agency (EPA) and the Division of Drinking Water (DDW) require this survey to ensure accurate reporting and to help safeguard public health.

Your service line is the underground pipe connecting the water main, typically located in the street, to your home or building. These lines can be made from various materials, including copper, plastic, galvanized iron or steel, and, in some older homes, lead. Identifying the material of your service line is crucial as it helps us take necessary steps to ensure your continued safety.

Why This Inventory Matters
Understanding your service line's composition allows us to protect our community's health better. While your drinking water is treated to be free from contaminants, it can still absorb lead if it passes through lead pipes. Identifying any lead service lines is vital so we can take the appropriate actions to minimize potential risks to you and your family.

Your Participation is Important
Please complete the attached survey to help us complete this inventory. This process is straightforward and important to maintaining our water system's integrity. If you're unsure how to identify your service line material, please don't hesitate to contact us at (760) 955-9885. We're here to assist you in any way we can.

Please return the completed survey and a photo of the service line entering your home or building. You can email these to customerservice@sdd.sbcounty.gov *or* visit our office during regular business hours from 8:00 a.m. – 4:00 p.m. to drop off the survey form and show photos to our staff at 15000 Smoke Tree Street, 1st Floor, Hesperia, CA 92345, or at 222 W. Hospitality Lane, 2nd Floor, San Bernardino, CA 92415.

BOARD OF SUPERVISORS

Col. Paul Cook (Ret.) Vice Chairman, First District
Jesse Armendarez Second District
Dawn Rowe Chair, Third District
Curt Hagman Fourth District
Joe Baca, Jr. Fifth District

Luther Snoke
Chief Executive Officer

Assurance of Water Safety
Rest assured, the County does not operate lead or copper service lines. Our water is safe, reliable, and consistently monitored to meet all health standards. Your cooperation in this survey will help us continue to ensure a high level of safety.

For More Information
If you have any questions or need additional information, please call us at (760) 955-9885. You can also visit the California State Water Resources Control Board's webpage for more information about lead in drinking water: Lead and Copper Rule (LCR) for Drinking Water | California State Water Resources Control Board.
